

Improving Logistics and Patient Care while Managing Critically Ill Patients in T3 (Imposed Challenges Secondary to COVID-19)

Physician Lead: *Dr. Matthew White*

Goals

- Optimizing the complex logistical and communication demands of managing critically ill patients in T3, especially with the added complexities of workflow related to the COVID-19 pandemic.
- Utilize a Delphi-like process with key stakeholders meeting to address the various barriers experienced and establishing methods and processes to best address them.

Outcomes

- Improve the quality of care for patients and their family AND simultaneously ensure the safety of physicians and other professionals, particularly within the extremely challenging time of the COVID-19 pandemic.

Budget approved: \$9,034
