

Development of a Multidisciplinary Stereotactic Radiosurgery Program for Patients with AVMs

Physician Lead: *Dr. Benjamin Mou*

Goals

- Create a partnership between neurosurgery and radiation oncology to provide radiosurgery for patients with cranial AVMs in Kelowna.
- Support organization and planning to establish the program.
- Create a referral program and treatment protocol including imaging and planning guidelines.

Outcomes

- Promotes collaborative physician engagement and communication.
- Relationship building between two disciplines working together to provide a new clinical service.

Budget approved: \$7,762
